LEVERAGE INFORMATION FOR A STRONGER COMPETITIVE ADVANTAGE

Organizational data is typically widespread across an organization. Often, more than 50% of the critical business information resides outside of its ERP system's central repository. Operations and production details, HR, CRM, and web data are managed in dedicated systems and rarely linked in a structural way. Disorganized and unstructured data presents challenges for any company, but for global organizations, those challenges are even greater.

Successful leaders are serious about cultivating a data-driven mindset across the company. Unreliable data wastes time, increases cost, weakens decision-making, threatens customer satisfaction, and makes it more difficult to execute a plan or strategy and to achieve business excellence.

Providing the necessary access to timely and reliable information in any organization is vital to success. At the same time, constant cyber threats force companies to protect and limit access to this critical data. Finding the right balance of accessibility and security is an ongoing struggle, but one that companies must master to enable the organization to perform effectively across multiple platforms and geographies.

The race to become a data-driven organization is more competitive than ever. Digital transformations are occurring rapidly worldwide, requiring data agility to be the main driver towards agile business decisions.

The "Business Intelligence for Industry Champions" approach delivers a path to fast, reliable, and relevant business information:

Altix Consulting partners with middle-market B-to-B clients to deliver business strategy, technology and innovation, and operational excellence support. Our in-country, multi-lingual and seasoned business advisors are experienced working in multi-cultural environments.
